INFUSION LOGISTICS · QUICK GUIDE

Setup Workbook Guide

How to fill in the setup workbook (the Excel file from **Ledger → Export All → Start from templates → Download all templates**) and bring it back into the app. Fill what you need, leave the rest empty, import.

Rules for every tab

Don't touch row 1

Row 1 holds the column names. Don't rename, delete or move them (Price Tiers is the one exception).

Row 2 is an example

Type over it with real data, or leave it exactly as it is and it is skipped.

One row per thing

One supplier, one item, one invoice per row.

Dates: `2026-10-16`

Year-month-day. Money as plain numbers: `12500`, no ₱, no commas.

Empty tab = skipped

Leave any tab you don't need blank. Nothing happens to it.

You see only your tabs

The workbook holds only the tabs your role can import. Clients appears for logistics businesses only.

Help tabs at the end

How to fill explains every column, **Valid Values** lists accepted words, **Accounts** lists account codes.

Which tabs you need

Just starting with the app

Suppliers, Clients, Inventory. Add Price Tiers if customers pay different prices. This is enough to start selling and buying.

Moving over from existing books

Also: Chart of Accounts (only if your books have their own codes), P&L History, Opening Balances, Open Receivables, Open Payables, Open Deposits & Advances.

Orders already placed with suppliers

Purchase Orders.

New bills, expenses or equipment

Bills, Expenses, Fixed Assets. Expenses and Fixed Assets post to the books straight away.

The tabs

The app imports the tabs in the workbook's own order, because later tabs refer to earlier ones (a bill names a supplier). Fill them in any order, but a name used on one tab must already be on the tab it comes from.

TAB 2 Suppliers The companies you buy from

Start here | Posts nothing

One row per supplier. Only the name is required. Fill this **before** Purchase Orders, Open Payables and Bills: those must name a supplier listed here. A name already in the app is left alone, so importing again is safe.

COLUMN	WHAT TO PUT	EXAMPLE
`name` *	Supplier name, unique	Metro Beans
`contactPerson · phone · email · address`	Contact details, if you have them	Joy Cruz · 0917 555 0100
`paymentTerms`	As their invoices say it	30 days
`leadTimeDays`	Days from ordering to delivery, 0 to 90. Decides how much to buy of what they supply. Blank = the default 7	5
`notes`	Anything worth remembering	Delivers Tuesdays only

TAB 3 Clients

Customers you sell to on account (logistics only)

Start here | Posts nothing

One row per customer. There is no password column on purpose: each client gets a link to set up their own login.

COLUMN	WHAT TO PUT	EXAMPLE
`name` *	Customer name, unique	Kasa Lokal
`phone · email`	An invalid email rejects the row	ar@kasalokal.ph
`paymentMethod`	How they usually pay (Cash if blank)	Account
`creditLimit`	Most they may owe at once. Blank = no limit, **0 = no credit**	50000
`creditTermsDays`	Days they have to pay	30
`segments`	Groups, separated by commas	wholesale, cafe
`contactNotes`	Anything about dealing with them	Invoice to accounts@

TAB 4 Inventory Your stock count and costs

Start here | You preview it first

One row per stock item, and **everything is per pack**: Pack and Unit say what one pack is, Qty counts packs, Cost is the price of one pack. In logistics each item also becomes a product you can sell.

COLUMN	WHAT TO PUT	2 L SYRUP BOTTLE
Code	Your item code. Blank = one is assigned	SYR-VAN
Product *	Name only, no size	Vanilla Syrup
Pack	What one pack holds	2
Unit *	kg, g, L, ml or pcs	L
Qty *	How many packs you counted. Blank = not counted, 0 = none on hand	30
Cost / pack *	What one pack costs you	350
SRP / unit	Selling price per kg, L or pc. To price per bottle, rename the column `SRP / pack`	225
Expiry date · Production date	Production date only for goods with no real expiry	2026-12-31
Low Stock At · Location	Warn below this; where it is kept	5 · Main bar

Don't leave Cost at 0. A zero cost makes every sale of that item look like 100% profit.

A 2 L bottle is sold and re-ordered as **1 pc**, never half a bottle.

TAB 5 Price Tiers

Different prices for different customers

Optional

One row per product. After Code, Product and List Price, **rename the "Dealer Price" column** to your tier's name and add one column per tier (Wholesale, Reseller...). A blank cell means no special price for that tier. New tier names are created for you.

CODE *	PRODUCT	LIST PRICE	WHOLESALE	RESELLER
SYR-VAN	Vanilla Syrup	450	400	420

TAB 1 Chart of Accounts

Only if your old books use their own account codes

Moving books

Each row is one of your accounts and the system account it belongs under, so the other tabs can use your codes. Skip it if you don't have your own codes.

COLUMN	WHAT TO PUT	EXAMPLE
`code` * · `name` *	Your code and name, as your books write them	X-1000 · BDO Savings
`goesUnder` *	The system account it belongs under (from the Accounts tab)	112000
`keepSeparate`	**Yes**: its own sub-account. **No**: your code is that system account. Use No for Sales, Cost of Sales and Discounts	Yes

TAB 6 P&L History

This year's income statement, month by month

Moving books

Posts one entry per month

One row per account, one column per month (`jan` ... `dec`). **Every amount positive**, the way the statement shows it. Leave out subtotal lines (Gross profit, Total expenses, Net income). Blank for months not closed yet.

CODE *	NAME	YEAR *	JAN	FEB	MAR
X-4000	Sales	2026	100000	110000	120000

TAB 7 Opening Balances

Your balance sheet on the switch-over day

Moving books | Sets your starting balances

One row per account and **every** account: cash, bank, receivables, inventory, equipment, payables, capital, retained earnings. Accumulated depreciation goes in as a negative. This is the only tab that sets balances; the open-invoice and deposit tabs below are the detail behind it.

COLUMN	WHAT TO PUT	EXAMPLE
`code` *	Balance-sheet accounts only	X-1000
`name`	For your own reading only	BDO Savings
`balance` *	As the balance sheet shows it. Minus sign for contra balances	50000
`asOf` *	**The same date on every row**	2026-08-31

TAB 8 Open Receivables

Customer invoices still unpaid on switch-over day

Moving books | Posts nothing

They show in **Ledger → AR & AP**, aged and ready to collect.

COLUMN	WHAT TO PUT	EXAMPLE
`customer` *	A name matching a client links the debt to them	Reyes Hardware
`invoiceNo` * · `invoiceDate` *	Your invoice number and date	SI-004512 · 2026-08-12
`dueDate`	When it falls overdue	2026-09-11
`amountOwed` *	What is **still** owed, after any part payment	38500

The total must equal Accounts Receivable on Opening Balances.

TAB 9 Purchase Orders

Orders already placed, not yet complete

Posts nothing

One row per item. Repeat the same `poNumber` on every line of one order. They arrive as open orders in Procurement.

COLUMN	WHAT TO PUT	EXAMPLE
`poNumber` *	Your PO number	PO-2026-0412
`supplier` *	Must be on the Suppliers tab	Metro Packaging
`orderDate` · `expectedDate`	When ordered; when it should arrive	2026-08-01
`itemCode` · `itemName` *	The code from Inventory links the line to that item	PKG-001 · Cartons 12x12
`qty` * · `unitCost` *	How many, price each	500 · 250

TAB 10 Open Payables

Supplier invoices still unpaid on switch-over day

Moving books | Posts nothing

They arrive approved in Bills, ready to pay. Put the same `poNumber` as on Purchase Orders and the two are linked automatically.

COLUMN	WHAT TO PUT	EXAMPLE
`supplier` *	Must be on the Suppliers tab	Metro Packaging
`invoiceNo` *	The supplier's invoice number	INV-88120
`amountOwed` *	What is **still** owed	125000
`invoiceDate` · `dueDate` · `description` · `poNumber`	Optional details	2026-08-05

The total must equal Accounts Payable on Opening Balances.

TAB 11 Open Deposits & Advances

Money paid ahead, not yet used up

Moving books | Posts nothing

COLUMN	WHAT TO PUT	EXAMPLE
`kind` *	Customer deposit · Customer credit · Supplier advance · Supplier credit · Employee advance	Customer deposit
`name` *	The client, supplier or employee. Credits and supplier kinds must match an existing name	Reyes Hardware
`reference` *	Your receipt or OR number. Stops the same row coming in twice	OR-10233
`date`	When the money was paid (default: the day you import)	2026-09-15
`amountRemaining` *	What is **still** unused	5000
`note`	What it is for	Deposit on October order

TAB 12 **Bills** New supplier invoices to process

Posts when you approve

Each bill arrives as **Pending** and posts nothing until you approve it in the app.

COLUMN	WHAT TO PUT	EXAMPLE
`supplier *` · `description *` · `amount *`	Who, what for, invoice total	Metro Beans · March beans · 12000
`expenseAccountCode *`	Account to charge, from the Accounts tab. Without it the bill can't be approved	510000
`dueDate` · `supplierInvoiceNo` · `poNumber`	Optional. The same invoice number can't be entered twice	INV-88120

TAB 13 **Expenses** Expenses to record now

Posts immediately

No approval step. Every row posts to your books the moment you import. Check the tab before importing. A date in a closed month is refused.

COLUMN	WHAT TO PUT	EXAMPLE
`amount` *	Full amount, before any tax withheld	3500
`categoryCode` *	Expense account, from the Accounts tab	640000
`description` *	What it was	March electricity
`paymentMethod` *	Paid from, from the Valid Values tab	Cash on Hand
`date` · `vendor` · `refNo` · `withholdingRate`	Optional. Withholding in percent (rent 5, professional fees 10)	2026-03-31 · Meralco

TAB 14 Fixed Assets

Equipment and other things the business owns

Posts immediately

Posts on import, as bought for cash. For used equipment, fill accumulated depreciation or it comes in as brand new.

COLUMN	WHAT TO PUT	EX
`name` *	What it is	Es ma
`class` *	From the Valid Values tab	Ma & Eq
`acquisitionCost` *	What was paid	60
`usefulLifeMonths` *	60 = 5 years	60
`accumulatedDepreciation`	Already worn off, if bought used or years ago	27
`salvageValue`	What it will still be worth at the end. Depreciation stops there	60
`acquisitionDate`	Default: today. A closed month is refused	20 15

`serialNumber · location · supplierName · referenceNumber`	For your records: serial, where it is, who sold it, their invoice number	LM 77 Ma

Importing

1. **Save as .xlsx.** Keep every tab, even the empty ones.
2. **In the app:** Ledger → Export All → Start from templates → **Import all**, then pick the file.
3. **Read the preview** ("This workbook will import"). It shows the rows found on each tab and any problem, by row number. Nothing is saved yet.
4. **Fix and re-import** if anything is flagged. Importing again is safe: existing suppliers and clients aren't duplicated.
5. **Press Import.** The tabs go in, in order, and the result lists what was added on each.

Prefer Google Sheets? Keep the workbook there and link it under **Settings → Setup workbook from Google Sheets**.

Before you press Import

- [ ] Row-2 examples overwritten, or left exactly as they were
- [ ] Suppliers and Clients filled before anything that names them
- [ ] Inventory costs filled in, none left at 0
- [ ] Open Receivables total = Accounts Receivable; Open Payables total = Accounts Payable (moving books)
- [ ] Opening Balances: one date, every balance-sheet account (moving books)
- [ ] Expenses and Fixed Assets double-checked: they post immediately

Quickest start: fill only Suppliers, Clients and Inventory, import, and add the rest later. Each tab can be imported on its own at any time.
